

COMPAC ABOVE GROUND POOL HEAT PUMP - Affordable & economical

NEW

Compac Heat Pump

Why a heat pump?

The heat pump is now recognised as the most economical and environmentally friendly method of heating. It simply allows heating of your swimming pool water by using the free and natural energy in the air while respecting the environment.

These units are designed for use on above ground pool applications. The Compac units are both easy to install and are an affordable option.

The Compac units have an integrated handle for ease of movement on site and comprehensive fault lights with clear guidance so time can be saved on site should any problems occur.

These units complete the package you can offer for a one stop shop for above ground pool applications.

Why Compac?

- Simple installation
- Cost Effective
- Environmentally friendly
- Clear and easy controls
- Titanium heat exchanger
- 2 year limited warranty (contact us for more details)
